Learning Strategies

Team 6

What are Learning Strategies?

- Methods developed by experts to improve overall studying ability.
- Help you absorb, retain, recall study content.
- Usage of resources such as thoughts, memories, logic, emotions.
- Improves memory, concentration, problem-solving, etc.

Active Learning

Instructional learning method. Teacher and student actively engage in the learning process.

Experiential

Learn through participation and experience.

Study tours, outdoor expeditions, education exchange programs.

Collective

Learning from each other through interactive means.

Brainstorming sessions, peer reviews, role-play games, puzzles.

Inquiry-Based

Explore teachings more deeply through self-assessment and reflection.

Critical thinking, self-evaluating, posing questions.

Paired

Pairs engaging in learning activities like puzzles, quizzes, etc.

Build on strengths, reduce weaknesses.

Mnemonic Learning

Recall series, groups, or collections of learning elements through mnemonic representation.

- Keywords – create an alternate mental image of study content by relating it with familiar objects
- Pegwords – simple memory technique for remembering lists of information – vocabulary, study keywords, names, historical dates, terminologies, etc.
- Short Forms – Self-made acronyms for long-form content to remember and recall them conveniently.

Text-Visual Combination

Merges textual study with a matching visual element.

If text is challenging to remember, visual association makes it easier.

Text-Visual Combination/ Dual Coding

Visuals can be unique to each individual.

Virtual classrooms, student-to-student interactions, informal learning sessions.

Spaced Learning

Learning in small amounts, spaced uniformly throughout a schedule.

Easier to retain information, make learning fun.

A sustainable learning strategy, instills a positive approach to learning.

Revision without Books and Notes

Revise studies from memory. Requires forming the habit of understanding the material, steadily transferring it to the brain, and revising without the assistance of the material.

Longer Retention	Remember what you studied for a longer time.
Simplified Recall	Recall what you studied faster.
Better Performance	Your brain is preconditioned to recall information independently.
Improved Brain Functioning	Makes your brain more efficient, improves overall brain functionality.
Flexibility	Can access your brain anytime for revisions.

Mixed Study Subjects

Instructional learning method. Teacher and student actively engage in the learning process.

- Avoid monotony
- Improve your skill set
- Hold information long term
- Enhance interpersonal transfer

Key Attributes of Learning Strategies
